Table of Contents

Foreword xv

Preface xvii

Section 1

Theory of Multitudes and Related Methodological Issues

Chapter 1

Theory of Multitudes as an Alternative to the Set Theory 1
Cyril Pshenichny, ITMO University, Russia

Chapter 2

Qualitative and Quantitative Formalisms for Knowledge Representation in the Theory of
Multitudes 32
Cyril Pshenichny, ITMO University, Russia

Chapter 3

Scenarios in Event Bushes: A Formal Proposal 76
Uwe Wolter, University of Bergen, Norway

Chapter 4

On Formalization and Representation in Collaborative Research 89
Paolo Diviacco, Istituto Nazionale di Oceanografia e di Geofisica Sperimentale (OGS), Italy

Section 2

Dynamic Knowledge Representation in Geosciences

Chapter 5

Qualitative Modeling of Ice Sheet Accumulation for Identification of Mass Balance Variation 99
Kirill Khvorostovsky, Nansen Environmental and Remote Sensing Center, Norway
Pavel Lunev, Polar Marine Geosurvey Expedition, Russia
Victoria Shterkhun, Karpinsky All-Russian Research Geological Institute (VSEGEI), Russia

Chapter 6

Conceptualization of the Dike Distribution Analysis Aiming at Identification of Eruptive Centers 119

Sophie Koneva, Karpinsky All-Russian Research Geological Institute (VSEGEI), Russia

Cyril Pshenichny, ITMO University, Russia

Chapter 7

Formation of Faden Quartz Druses in Mid-Carboniferous Sandstones of the Donetsk Basin 155

Oleg Krisak, Donetsk National Technical University, Donetsk People's Republic, formerly Ukraine

Vyacheslav Bezrukov, ITMO University, Russia

Chapter 8

An Approach to Improve Bayesian Inference in Assessment of Coast Evolution 163

Victoria Shterkhun, Karpinsky All-Russian Research Geological Institute (VSEGEI), Russia

Gonéri Le Cozannet, BRGM – French Geological Survey, France

Manuel Garcin, BRGM – French Geological Survey, France

Chapter 9

Modeling of Geological Evolution of the Gulf of Mannar Area, South India, by the Event Bush

Method 175

Biju Longhinos, College of Engineering, Trivandrum, India

Cyril Pshenichny, ITMO University, Russia

Vladimir Anokhin, Russian Academy of Sciences, Institute of Limnology, Russia

Jijoy Joseph, University College, Trivandrum, India

Sophie Koneva, Karpinsky All-Russian Geological Research Institute (VSEGEI), Russia

Teena Chauhan, University of Bergen, Norway

Chapter 10

Modeling Spatial Evolution: Review of Methods and Its Significance 235

G. Jayanthi, Pondicherry University, India

V. Uma, Pondicherry University, India

Section 3

Dynamic Knowledge Representation in Other Domains

Chapter 11

Biography as Scenario: Representing Historical Knowledge by the Event Bush 261

Maria Mandrik, Archive of the Russian Academy of Sciences, Russia

Sergey Arustamov, ITMO University, Russia

Chapter 12

Dynamic Knowledge Representation as a Formalization Conveyor for Manmade Systems With Useful Impulse 270

Andrey Naumov, ITMO University, Russia
Ilya Popov, ITMO University, Russia
Igor Bondarenko, ITMO University, Russia
Boris Krylov, ITMO University, Russia
Roman Timonin, OpenWay Group, Russia
Ivan Ofitserov, Independent Researcher, Russia

Chapter 13

Petri Net vs. Event Bush in Description of Environments of Alternative Directed Changes 286

Vyacheslav Rogalchuk, St. Petersburg State Transport University, Russia
Sergey Arustamov, ITMO University, Russia
Nikita Solovyov, ITMO University, Russia
Aleksandra Malisheva, Universite d'Angers, France

Chapter 14

The Event Bush Method in the Light of Typed Graphs Illustrated by Common Sense Reasoning.... 320

Uwe Wolter, University of Bergen, Norway
Olga Korableva, Saint Petersburg State University, Russia
Nikita Solovyov, ITMO University, Russia

Chapter 15

First Results of Formalization of Drilling Knowledge by the Event Bush Method..... 354

Pavel Komar, Donetsk National Technical University, Donetsk People's Republic, formerly Ukraine
Alexander Khokhulia, Donetsk National Technical University, Donetsk People's Republic, formerly Ukraine
Yuri Gatchin, ITMO University, Russia

Compilation of References 367

Chapter 7

Formation of Faden Quartz Druses in Mid- Carboniferous Sandstones of the Donetsk Basin

Oleg Krisak

Donetsk National Technical University, Donetsk People's Republic, formerly Ukraine

Vyacheslav Bezrukov

ITMO University, Russia

ABSTRACT

The chapter addresses the mechanism of growth of druses of faden quartz in a tectonically deformed sandstone. A peculiar feature of this type of quartz, the so-called "white tape" represented by fine sub-parallel cracks with fluid inclusions, appears highly informative about the genesis of the mineral and tectonic regime of its growth. Two stages of formation of druses of faden quartz are recognized. The suggested mechanism is checked for contradictions by means of the event bush method. The proposed event bush model appears to describe a wider range of quartz formation environments and therefore may serve as a conceptual framework for various models of quartz growth in sedimentary rocks.

INTRODUCTION

Quartz is one of the most common minerals in the earth's crust. It is abundantly present in sedimentary rocks and occurs, inter alia, in vein mineral assemblages. Its perfectly shaped aggregates in druses of rock crystal, smoky quartz, amethyst and other coloured quartz varieties are desirable specimens for any mineralogical museum. Still, the most valuable at present are considered faden quartz crystals. Quartz with "white tape", or faden quartz, is a quartz crystal with a through white nebulous tape.

The formation of faden quartz has long been debated by mineralogists. Recent studies have brought us close to a solution that seems to stand the test of time. Nonetheless, as is common in geology, this idea, supposedly general in application, was informed mainly by the scientists' intuition, and now we are

ABSTRACT

Geological drilling, being one of the key methods of investigation of the earth's interior and extraction of hydrocarbons and groundwater, represents a highly promising, urgent, yet virtually uncovered area for dynamic knowledge representation. In one sense, it favors some straightforward solution; in another, it brings serious challenges – such as interdisciplinarity and difference in reasoning by formulae and by concepts. Most importantly, existing conceptual models developed in the static knowledge representation paradigm generally do not reflect the dynamic character of the process of drilling. This chapter aims only to start paving this road by examining whether, and how, the principal method of dynamic knowledge representation, the event bush, may work in the interdisciplinary domain of drilling.

INTRODUCTION

Drilling, being one of the key methods of investigation of the earth's interior and extraction of hydrocarbons and groundwater, represents an interdisciplinary domain, which brings together geological and technical, qualitative and quantitative, well-understood and purely intuitive knowledge. Specialists from different fields (engineers, geologists, geophysicists, economists) perceive the issues of drilling differently, and understanding may be readily hampered by discordance of personal perceptions of collaborators or a teacher and student. To efficiently plan and manage drilling campaigns, support teamwork, handle

Dynamic Knowledge Representation in Scientific Domains

The main approach to understanding and creating knowledge engineering concepts is static knowledge. Currently, there is a need to approach knowledge through a dynamic lens and address changing relations on an elaborated syntactic and semantic basis.

Dynamic Knowledge Representation in Scientific Domains provides emerging research on the internal and external changes in knowledge within various subject areas and their visual representations. While highlighting topics such as behavior diagrams, distribution analysis, and qualitative modeling, this publication explores the structural development and assessment of knowledge models. This book is an important resource for academicians, researchers, students, and practitioners seeking current research on information visualization in order to foster research and collaboration.

Topics Covered

- Behavior Diagrams
- Collaborative Research
- Decisions Support
- Distribution Analysis
- Event Buses
- Graph Visualization
- Petri Nets
- Qualitative Bayesian Reasoning
- Qualitative Modeling
